Time Zone Names & Time Difference by GreatData.com

Time zones are measured from Greenwich, England. North American time zones are behind GMT and our chart tells you how many hours a zone is behind GMT. For instance, when it is 1:00 p.m. in the Eastern Time Zone, it is already 6:00 p.m. in Greenwich.

Note: some time zones don't have standard names, so we created our own zone codes. This chart contains Standard Time, not Daylight Savings Time (usually, this doesn't matter). To find the difference between your time zone and another, just find your time zone and the other zone on the chart, subtract the lesser number of hours behind GMT from the greater number of hours. If your time zone is *above* the other zone, you are *ahead* of the other zone. For instance, if you are in the Eastern Time Zone and you need to call Hawaii, you will subtract 5 from 10 and since you are above Hawaii on the chart, you are ahead of them by 5 hours.

Also Note: In the Area Code / Time Zone Master List, if there is an Asterisk (*) after the time zone, then that area code crosses more than one time zone at least part of the year.

Zone Code	Time Zone Description	Hours behind GMT
NFI	Newfoundland Island (Currently, Area Code 709 covers both Newfoundland Island & Mainland and is in NFI & ATL zones).	3.5
